

WITEKLAB

**YOUR CONTECH INNOVATION PARTNER**

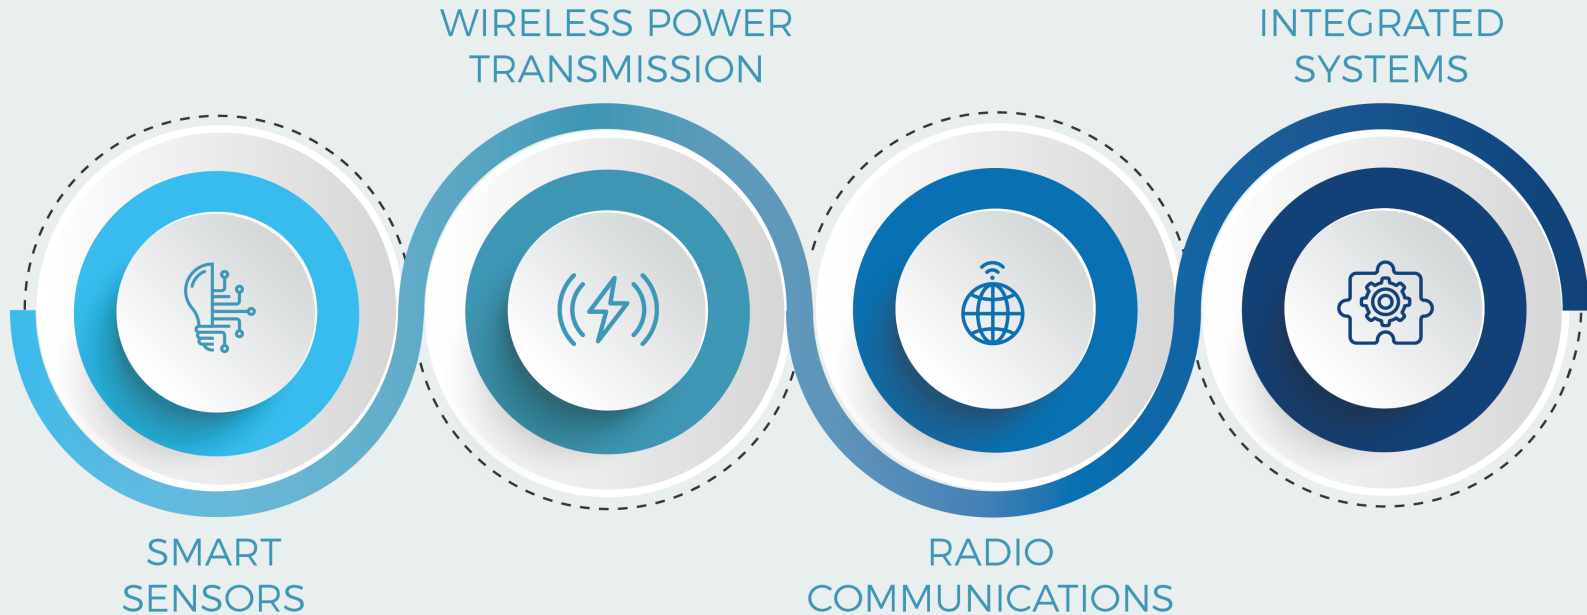

# WITEKLAB

IoT SOLUTIONS FOR THE CONSTRUCTION AND MAINTENANCE  
OF INFRASTRUCTURES AND FACILITIES

**Witeklab develops its own technological solutions in the fields of telecommunications, electronics and integrated computer systems with the aim of turning knowledge and daily innovation into solutions that simplify and make easier industrial, work and service processes.**

The application of sensor technology and wireless data transmission, together with the processing and presentation of data through the cloud, offer great advantages for the sectors of private construction, civil works and infrastructure and facilities management.

**WITEKLAB**  
CORROCHIP

Long-term monitoring of corrosion in reinforced concrete structures.

**WITEKLAB**  
TRENCHIP

System for locating hidden or underground installations by incorporating sensors at key points.

**WITEKLAB**  
monSEC

Wireless sensor to monitor, in real time, the concrete setting process.

**WITEKLAB**  
ROCKCHIP

Autonomous telemetry system that detects changes in slope protection systems.

**WITEKLAB**  
HUMIDITY

Sensors to detect pathologies in structures, walls and buildings, related to humidity.

**WITEKLAB**  
CO2

Develops multiple energy efficiency improvements for a comfortable and healthy environment.

**WITEKLAB**  
CORROCHIP  
COVER

Early detection of the corrosion initiation process in reinforced concrete.

**WITEKLAB**  
RIFTSENSOR

It allows the detection of cracks, small gaps, in the order of microns, in walls, walls or domes.

**WITEKLAB**  
HRCSENSOR

Sensors that measure the ambient temperature and humidity of buildings.

**WITEKLAB**  
HEATSENSOR

Sensor for measuring temperature and humidity inside structures.

**WITEKLAB**  
SHOCKSENSOR

Allows the measurement of movements, shocks or displacements, at multiple points of a structure or wall.

**WITEKLAB**  
SLANTCHIP

Sensor for measuring the inclination of the building structure or construction.

**WITEKLAB**  
CPF-SENSOR

Real-time detection and monitoring of the flow of visitors to a building.

**SENSORS**

**WITEKLAB**

# SENSORS IN INFRASTRUCTURES

## CORROCHIP

The most efficient solution for long-term corrosion monitoring in reinforced concrete structures.

## TRENCH

System that allows to locate hidden or underground facilities incorporating sensors at key points.

## MONSEC

Wireless sensor to control, in real time, the concrete setting process in construction projects.

## ROCKCHIP

Autonomous telemetry system that detects changes in slope protection and landslide protection systems.

# SENSORS IN CONSTRUCTION

## FOUNDATIONS AND STRUCTURE

# 1

**MONSEC** wireless sensor that allows to carry out, remotely and in real time, the monitoring of the concrete setting process in construction projects.

 WIRELESS TRANSMISSION

**CORROCHIP** The most efficient solution for long-term corrosion monitoring in reinforced concrete structures.

**RIFTSENSOR** it allows to detect fissures or cracks, of the order of microns, in walls or domes.

## FACILITIES

# 2

**TRENCHIP** allows to locate hidden installations incorporating sensors at key points.

**HUMIDITY** detects pathologies in the building and housing related to humidity.

**CO2** allows to develop multiple energy efficiency improvements and achieve a healthy environment.

 SMART SENSORS

## CONTROL PLATFORM

# 3

**COMMUNITY** is the digital, IoT and sensory solution for Real Estate Developers and Communities of Owners, where all the information collected by the sensor is integrated together with technical and administrative information of the promotion.

 INTEGRATED SYSTEMS

# SENSORS IN HERITAGE

Sensors that perform temperature and humidity measurements.

It allows to control the concentration of CO2 in the air and evaluate its quality in indoor areas.

Sensor that allows to measure the temperature and humidity inside structures.

It allows to detect fissures, small separations or cracks, of the order of microns, in walls, walls or domes.

Sensor that allows to measure the temperature and humidity inside structures.

Sensor to measure the inclination of the structure of the building or construction.

Real-time detection and monitoring of the flow of visitors to a building.
